Visualization - HealthVis

Geographic visualization: designing manipulable maps for exploring temporally varying georeferenced statistics. Alan M. MacEachren, A.M. Boscoe, F.P. Haug, D. Pickle, L.W. (1998). Information

Case Study: Design and Assessment of an Enhanced Geographic

Information System for Exploration of Multivariate Health Statistics.

November 23, 2009 Critique

 Cons Identifying trends still is not easy without knowing the right level of focus beforehand. (only 3 of 9 participants noticed the targeted trend)

- Lack of labeling (i.e. values on the scatterplot, states on the map)

November 23, 2009

Combining cross map and animation: neat interaction technique to reveal spatio-temporal patterns associated with two variables Nice visualization given the tools available at the time?

Critique

 Cons - PCP a good way to visualize multidimensional geospatial data? Critique Cons

Identifying trends still is not easy without knowing the right level of focus

beforehand. (only 3 of 9 participants noticed the targeted trend) Lack of labeling (i.e. values on the scatterplot, states on the map)

Critique

• Cons

- PCP a good way to visualize multidimensional geospatial data? Clustering and tangling

- Unsuitable for comparing distant axes

Image from wikipedia.org

- Added labeling on both scatterplot and legend - Attempt to overcome PCP's disadvantages (brushing, focusing and

coloring)

- Utilizing multiple linked views

Technique - HealthVisPCP
